

Lego Triumph

A group of children from St Peter's Primary school must now travel the length of the country to Bristol, for the National Lego Finals, after winning the regional heat at Teesside University. In a very close competition, St Peter's managed to finish in the top three in all 4 categories that they were being judged on. The children finished second in the robot games with John. E. Batty eventually winning with a commendable score. St Peter's also finished second in the project category with their amazing interactive picture book that promotes love for animals. They were supported on this project by White Cross Vets in Redcar who gave up their time to provide vital information and encouragement for the children. St Peter's were delighted to win the core values category that is presented to the team they feel show great team work, but also have a friendly and helpful approach to the tournament. The children are now very excited to enter the national finals and will represent the area with pride at the University of the West of England (UWE) Exhibition and Conference Centre at the end of February.
