

St Peter's Mathletics Launch

After a very successful trial, St. Peter's have launched Mathletics throughout the whole school from reception to year 6. This online maths program engages children through activities that are linked to the national curriculum. Furthermore children can compete against children in their own class or around the world on Live Mathletics. Mathletics encourages and stretches children, promoting a growth mind set and adapts to the learning pace of each child. Children are awarded for their participation and can see how they compare to other users in the country or all over the world. Within the first two weeks St. Peter's have already had children placed in the top 100 users in the country which is a fantastic achievement. Hopefully children will continue to become independent learners and build their confidence for maths in class.
