

## Regional Lego League Technology Finals

St. Peter's visited Newcastle for the regional Lego tournament this year, competing against primary but mainly secondary schools at the Hancock Museum. The children had completed a project to improve Marshall Drive playing field and the judges were 'blown away' by their performance handing them first place overall in this category. In the robot game, the children achieved 300 points on their very first go but this was eventually beaten with the winners managing 315 points. The children have developed so much through the process and a huge thank you for putting in so much extra time, you are a credit to the school.
